***CURRENT CONCEPTS IN HEAD AND NECK &
ENDOCRINE PATHOLOGY***
JUNE 9-11, 2023

Co-Directors:

William C. Faquin, MD PhD

Vânia Nosé, MD PhD

Peter M. Sadow, MD PhD

This three-day virtual postgraduate course provides a broad overview of head and neck & endocrine pathology and is led by Harvard Medical School faculty with known expertise in the field along with invited renowned guest expert faculty. The course is designed to provide comprehensive, state of the field diagnostic updates in head and neck & endocrine pathology, emphasizing practical applications for specialist and generalist pathologists, highlighting common pitfalls and how to avoid them. It will cover pathology topics including oropharynx, larynx, sinonasal cavity, oral cavity (including oral maxillofacial pathology), ear, salivary gland, thyroid, parathyroid, adrenal, pituitary, and GI endocrine and will also include lectures on skin, bone, soft tissue, and hematopoietic lesions of the head and neck. This three-day course features didactic lectures, case presentations, and opportunities for live interaction with faculty in question-and-answer periods. Lectures will be available in PDF format for download. Recorded lectures will be available to review online for 1 month after completion of the live course.
